## Asia Pacific Regional Seminar: Singapore Agenda 2022

### Opening & Welcome

Thursday 6 Oct - 13:00 - 13:30

### The Net-Zero Journey: The Changing Role of Regulators?

The Monetary Authority of Singapore (MAS) is the regulator of one of the world's leading international financial centres. In this fireside chat we explore the regulatory shift that is needed to see an acceleration of private sector finance supporting the transition to a low carbon economy.

Moderated by: Sean Kidney, CEO and Founder of Climate Bonds Initiative

### Session 1

Thursday 6 Oct - 13:30 - 14:30

### Going Beyond Green: Is Asia Ready for Transition?

**This session will focus on: The opportunities involved for financing credible transitions and the role of financial markets in supporting transitions**

Every major economy has now committed to challenging climate targets. It is clear that they need to start making hard decisions in order to become low-carbon and climate resilient economies. Players in hard-to-abate sectors need to revamp business operational models to reflect the risks and opportunities climate change is placing at humanity's door.

These shifts require tremendous amounts of funding which goes beyond public sector funding; private financing needs to be mobilised.

### Networking break

Thursday 6 Oct - 14:30 - 15:00

## Session 2

Thursday 6 Oct - 15:00 - 16:00

### Taxonomy: the procurement guide for USD5 trillion p.a

**This session will focus on: how the universe of taxonomies will further develop to address transition and resilience in a way that opens up investment opportunities.**

Taxonomies have been developed to help the market identify assets and activities consistent with addressing global climate targets. The first was from Climate Bonds in 2012, then China, the EU and now across ASEAN.

## Session 3

Thursday 6 Oct - 16:00 - 17:00

### Mitigating Climate Change. The role of Governments

**This session will focus on: an overview of what is being done and opportunities for Governments to act.**

The investment sector is recognising the urgency of addressing climate change, but enabling activity is needed by Governments to grow the pool of green investment opportunities.

To deliver prosperity and growth in a rapidly changing world economy, policy and regulatory frameworks need to be in place to direct capital into everything from clean energy and low-carbon buildings to industrial transition and sustainable agriculture.

## Closing Remarks

Thursday 6 Oct - 17:00 - 17:15

## Networking reception

Thursday 6 Oct - 17:15 - 18:45
